

Docker Set Up through WSL

NOTE:

- You must have admin rights to proceed with this Installation,
OR
- You can raise an **IT Ticket through Ginger** as well for below set up (Ginger Subject– Install Docker on Windows using WSL).

Docker Set up through WSL:

1. Install Ubuntu from Microsoft Store

2.

3. Username – “enter your username” Password – “choose password”

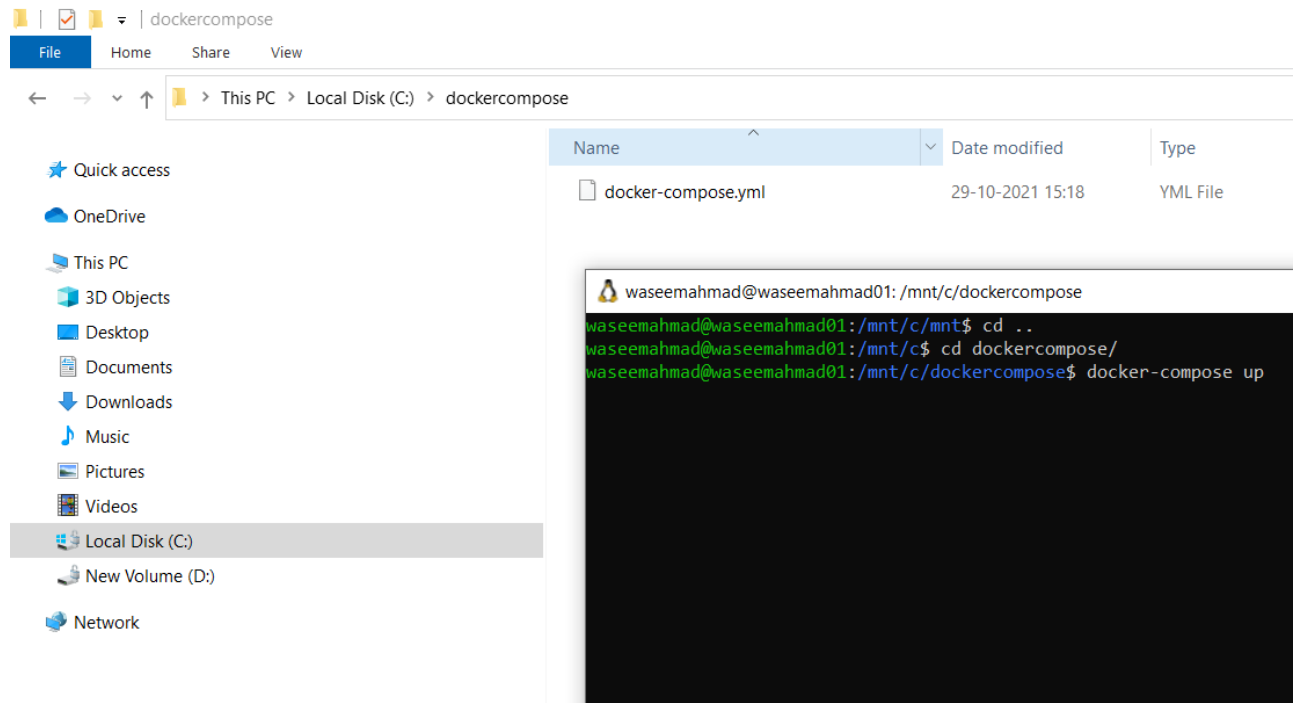

4. <https://pureinfotech.com/install-windows-subsystem-linux-2-windows-10/>

5. <https://dev.to/bartr/install-docker-on-windows-subsystem-for-linux-v2-ubuntu-5dl7>

6. For docker compose run “sudo curl -L

"[https://github.com/docker/compose/releases/download/1.24.0/docker-compose-\\$\(uname -s\)-\\$\(uname -m\)](https://github.com/docker/compose/releases/download/1.24.0/docker-compose-$(uname -s)-$(uname -m))" -o /usr/local/bin/docker-compose”

7. Now you can run docker compose command to run dependencies like below

8. Once you done with the above set up,

1. To access docker -> Just go to search bar -> then type “WSL” & open it -> then start executing docker commands -> docker login.
